

Hanith Sai Kumar Reddy Pulimi

Tampa, FL 33613 | (813) 568-7329 | hanithpulimi6767@gmail.com | linkedin.com/in/hanith-reddy-pulimi-1a57b1299

PROFESSIONAL SUMMARY

Detail-oriented **SRE / DevOps Engineer** pursuing an **M.S. in Computer Science at USF** with hands-on experience in cloud infrastructure, CI/CD automation, container orchestration, and production reliability engineering. Proficient in **Docker, Kubernetes, Terraform, GitHub Actions, AWS**, and modern observability toolchains including **CloudWatch, Grafana, Splunk**, and **New Relic**. Skilled in applying core **SRE principles** — SLO/SLI definition, error budget tracking, blameless postmortems, incident triage, and automation-first operational workflows — to build self-healing, fault-tolerant, and highly available distributed systems.

TECHNICAL SKILLS

- Linux
- Amazon Web Services (AWS)
- Kubernetes (EKS)
- Docker
- Terraform / Infrastructure as Code (IaC)
- GitHub / GitHub Actions (CI/CD)
- Harness CI/CD
- Bash / Shell Scripting
- Python (Automation & Scripting)
- Prometheus / Alert Manager
- Splunk
- Grafana
- New Relic
- AWS CloudWatch
- AWS EC2, S3, RDS, IAM, Lambda, EKS, ECR
- Firebase / Firestore / Cloud Functions
- SQL / PostgreSQL / MongoDB
- REST APIs / Postman
- ServiceNow / JIRA
- Incident Management / ITIL v4
- Agile / Scrum

PROFESSIONAL EXPERIENCE

Site Reliability / DevOps Intern — Cognizant Technology Solutions | Jan 2024 – May 2024

- Drove **incident triage, on-call response**, and blameless postmortems in an **ITIL v4** SRE framework; built **Grafana/CloudWatch** dashboards tracking **SLIs/SLOs** and provisioned infrastructure via **Terraform IaC** across multi-cloud environments. Configured **GitHub Actions CI/CD** with rollback gates and contributed to **Kubernetes** pod autoscaling, liveness/readiness probes, and namespace-level resource management to enforce zero-downtime releases and minimize MTTR.

Artificial Intelligence Engineer Intern — YoungMinds Technology Solutions | Jan 2023 – May 2023

- Deployed **ML inference pipelines** on **AWS** as **Docker/ECR** containers via automated **CI/CD workflows**, boosting accuracy by **15%**; automated **Python/CRON** preprocessing pipelines cutting toil by **30%** and defined **model SLOs** with **CloudWatch** drift monitoring. Implemented automated retraining triggers on threshold breach, version-controlled artifacts in **AWS S3**, and produced operational runbooks aligning **MLOps reliability** practices with production SRE observability standards.

Software Development Engineer Intern — Internbug Technologies | Jun 2022 – Dec 2022

- Deployed **cloud-native apps** on **Firebase** with **OAuth 2.0/JWT**, **Firestore** real-time sync, and **GitHub Actions** pipelines with smoke testing and rollback gates, driving **25% engagement uplift**. Performed **RCA** and log-based debugging using **Postman** for API validation reducing incidents by **10%**; enforced **GitFlow** branching, **JIRA** sprint tracking, and **ITIL-aligned** change management for auditable production releases.

EDUCATION

MS, Computer Science

Aug 2024 – May 2026

University of South Florida | Tampa, FL

Coursework: NLP, Artificial Intelligence, Operating Systems, Computer Architecture, Theory of Algorithms

BE, Computer Science and Engineering

Nov 2020 – May 2024

R.M.D Engineering College, Anna University | India

GPA: 8.60/10 | Coursework: Cloud Computing, Operating Systems, Computer Networks, Machine Learning, Artificial Intelligence, Data Structures

KEY PROJECTS

Finderly — Cloud-Native Lost & Found Platform

React, TypeScript, Firebase, Firestore, Cloud Functions, Google OAuth, REST APIs

- Architected a **serverless event-driven platform** on **Firebase** with **Cloud Functions** auto-scaling backend, **Firestore** real-time DB, **Google OAuth 2.0 / IAM** identity management, and **Firebase performance monitoring** for full-stack observability. Implemented **SLO-aligned uptime targets**, multi-channel alerting, zero-downtime deployments, and a custom sub-second **scoring algorithm** with secure real-time messaging across the distributed system.

LLM Evaluation Pipeline — Automated AI Benchmarking System

Python, Hugging Face, Prompt Engineering, NLP, GitHub Actions CI/CD

- Built an **automated MLOps evaluation pipeline** with **SLO-style performance scoring**, structured test harnesses, and regression tracking integrated into **GitHub Actions** for model-triggered benchmark execution and cost-vs-performance tradeoff reporting. Applied **statistical prompt engineering** to assess model reliability under input distribution shifts, operationalizing the system as a reusable **reliability validation tool** aligned with SRE continuous validation principles.

Sign Language Detection — Real-Time ML Inference Pipeline

Python, MediaPipe, OpenCV, TensorFlow, Keras, Docker | Published — ICAETC 2023

- Engineered a real-time **ASL inference system** at **94% accuracy / <100ms latency** using **MediaPipe** landmarks and optimized **TensorFlow/Keras** classifier; containerized with **Docker** for horizontally scalable deployment targeting production **SLO-grade latency** constraints. Applied model quantization and augmentation-driven feature engineering to minimize resource overhead while preserving reliability — published at **ICAETC 2023** with full performance benchmarking documentation.

Churn Prediction & Spam Detection — Automated ML Decision Pipelines

Python, Scikit-learn, NLP, Logistic Regression, REST APIs

- Built two **end-to-end automated classification pipelines** — a **churn prediction model** (simulated **20% retention uplift**) and **spam SMS detector** using NLP **TF-IDF vectorization (98% accuracy)** — both exposed via **REST API endpoints** for real-time inference. Implemented versioned artifact storage, **cross-validation**, precision-recall **threshold alerting**, and full pipeline automation across ingestion, preprocessing, training, and evaluation — aligned with SRE production reliability standards.

PUBLICATIONS & RESEARCH

- **Sign Language Detection System** — *ICAETC 2023*. Real-time ASL pipeline achieving 94% accuracy at sub-100ms latency using MediaPipe and TensorFlow/Keras.
- **Deep Learning Models for Potato Leaf Disease Diagnosis** — *Int. Journal of Research in Engineering, Science and Management*, Jul 2023. CNN classifier at 92% accuracy for early agricultural disease detection.
- **A Critical Study on the Dark Web and Dark Nets** — *Scopus-indexed journal*. Analysis of darknet technologies, anonymization protocols, and enterprise cybersecurity threat vectors.
- **STACKSORT: A Novel Sorting Algorithm** — *Peer-reviewed journal*. Hybrid stack-based sort outperforming $O(n \log n)$ algorithms on large-scale datasets.

CERTIFICATIONS

- AI for Everyone — Coursera / DeepLearning.AI
- Cloud Foundation — Great Learning
- Introduction to Java Programming — Coursera
- Agile Methodologies and Scrum Practices — Cognizant (Forage)
